

PSS Diagrams and Mockups

Aaron Noble - CSC 345

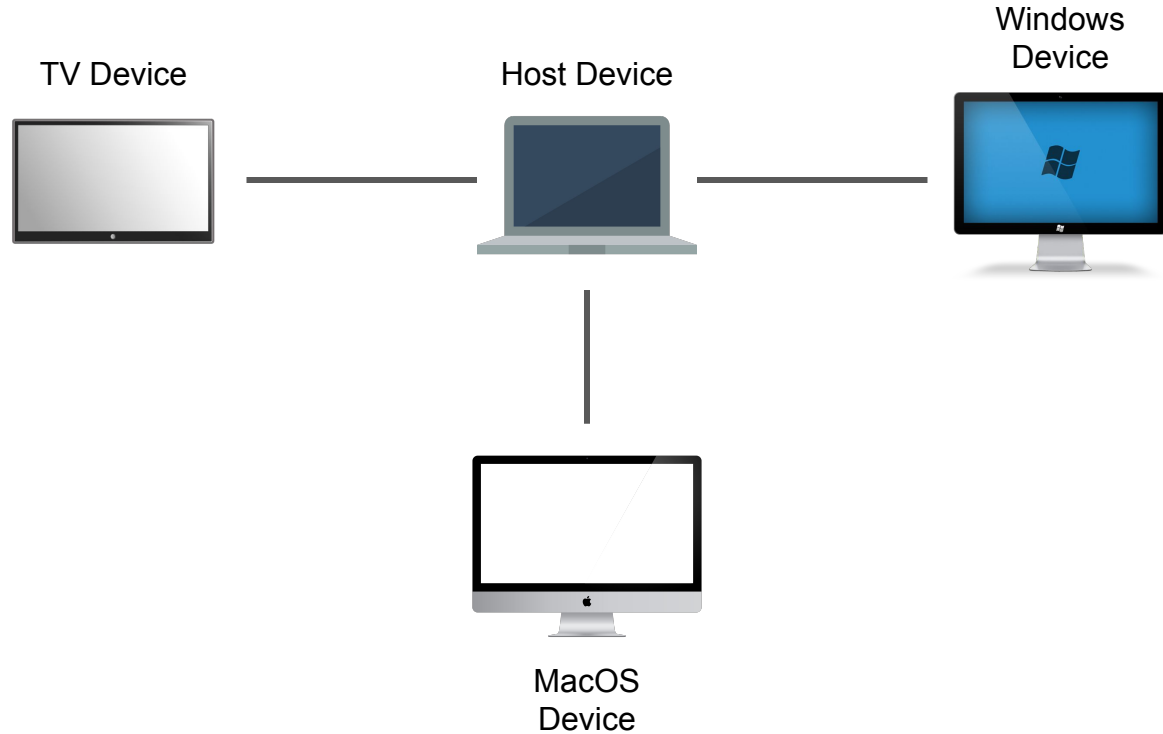

Primary Functions

- Host sends requests to other devices to allow them to view host's screen
- Devices can be found through Bluetooth or LAN
- Appropriately adjust to the screen(s) being shared onto
- View shared screen in real-time; video does not lag behind

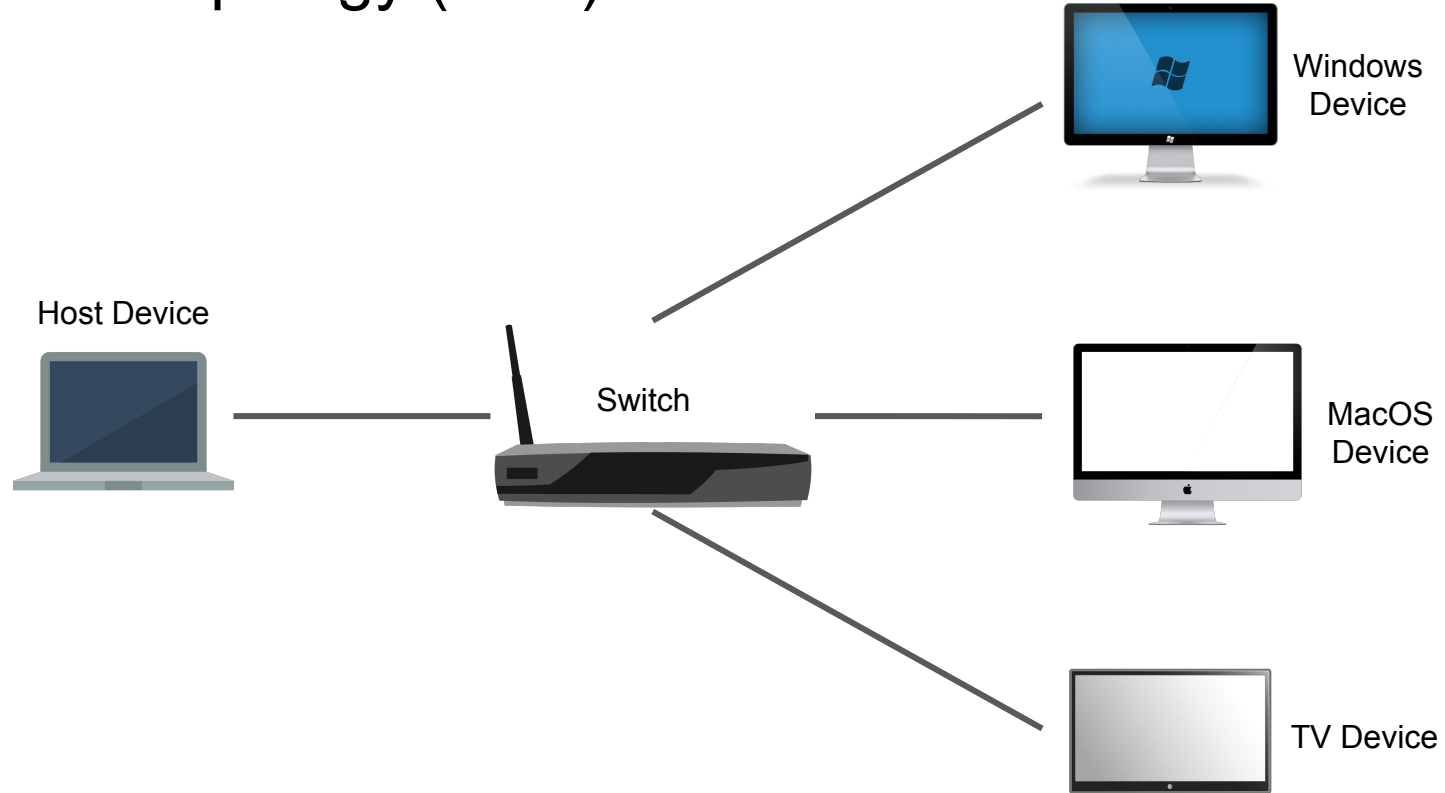

Needed Data

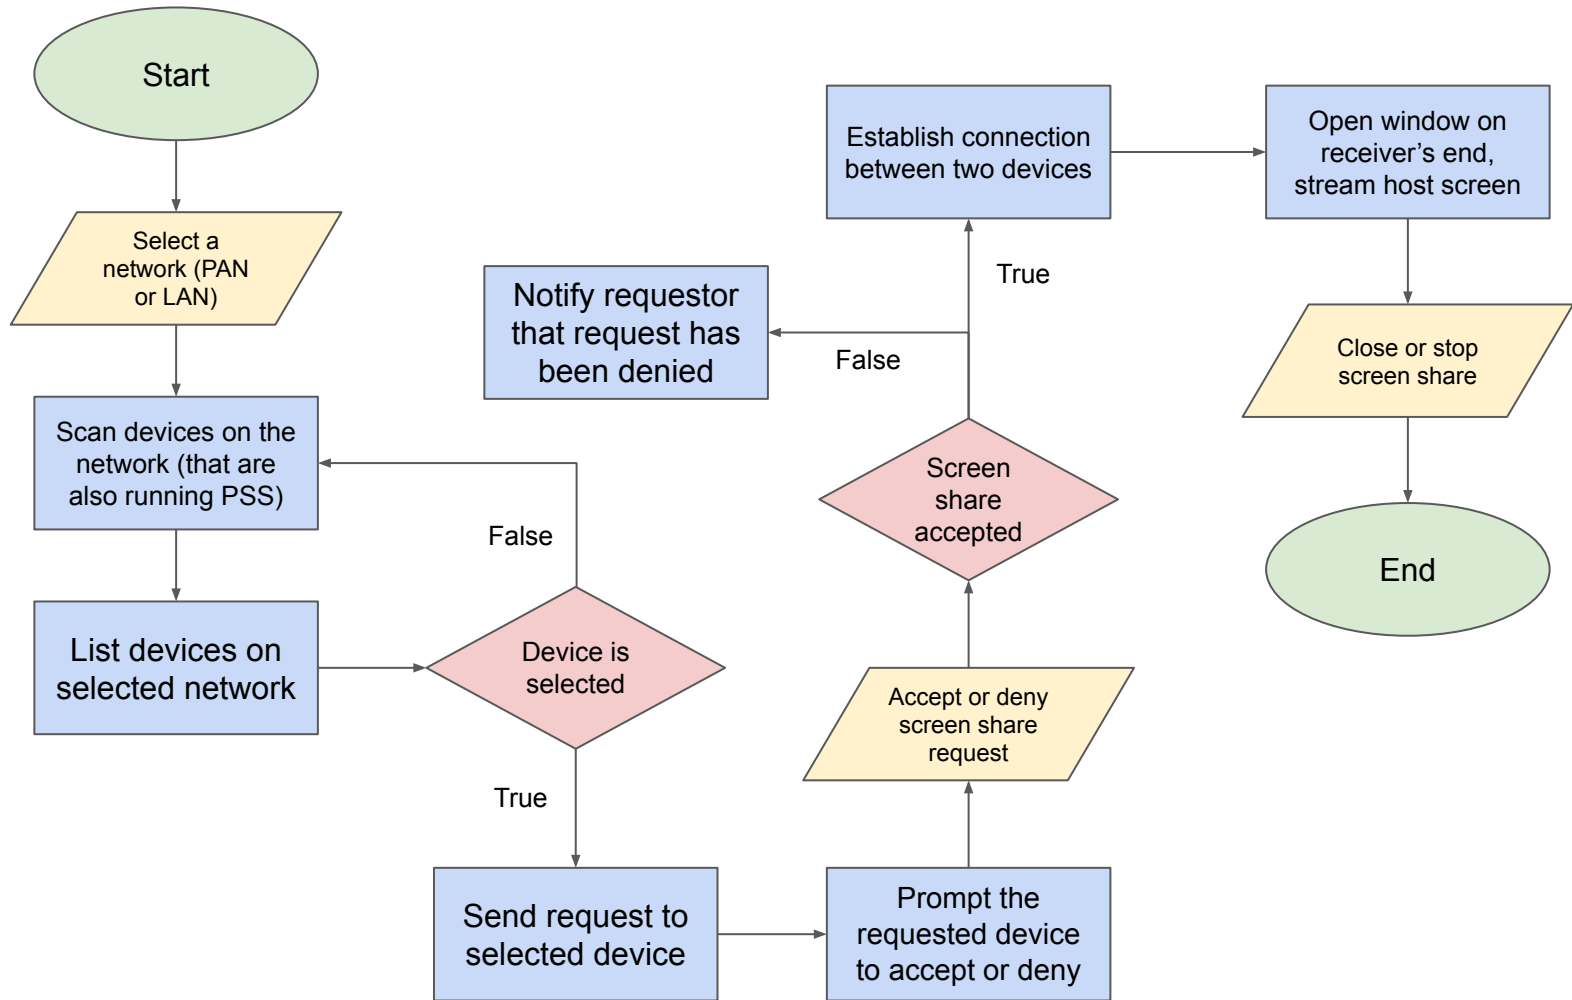

- Dimensions of screens, both host and receiver(s)
- Device IP addresses
- Method of transport (PAN or LAN)

Network Topology (Bluetooth) - P2P

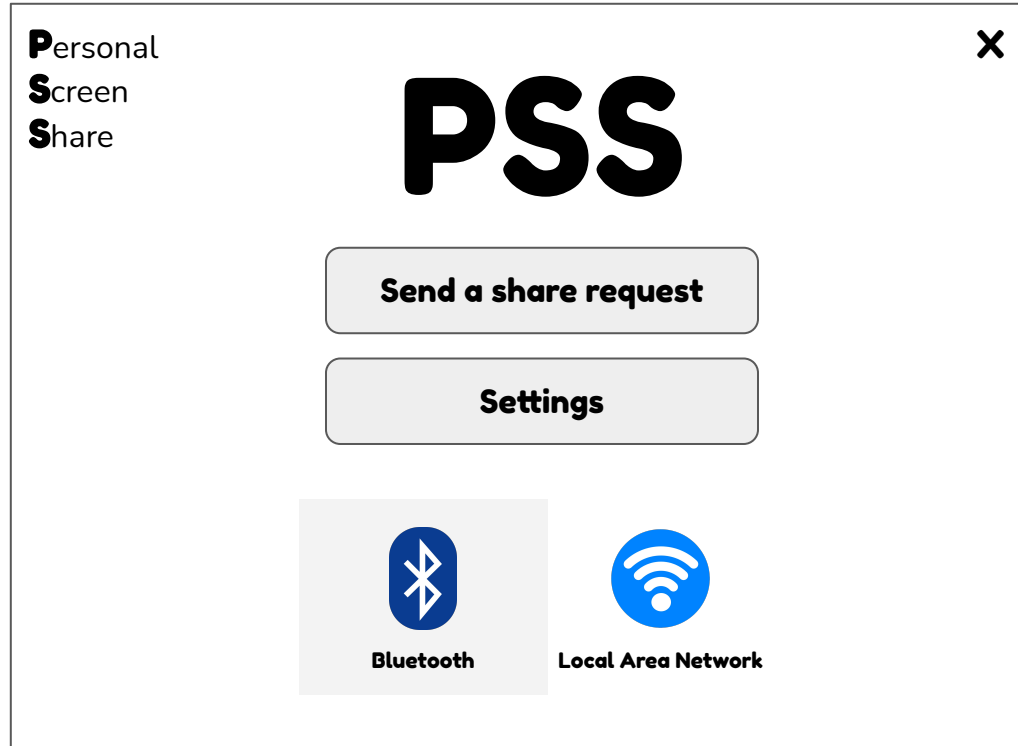

Network Topology (LAN)

Main Title Window

Request Popup

**(Device Name) has requested to share their
screen with you.**

Accept

Deny

Settings

Default settings

Shared screen size: **Fit to screen** ▼

Close on exit: **No** ▼

Save **Cancel**

This will adjust the size of the displayed shared screen. By default, it will fit to the current monitor's screen size.

This setting allows the user to choose if the program remains running in the program even if the title screen is closed. This would allow for other users to send requests to the device still.
